General Information

Mint

Apply Tough as a broadcast treatment in sufficient water (20-40 gallons per acre recommended) to ensure good coverage of the weeds. One to two applications of Tough 5EC at 24 ozs. per acre may be made per crop with a minimum of 14 days between applications. For best control of broadleaf weeds, applications should be targeted to actively growing weeds by the 4 leaf stage (approximately 3 inches in height or less). A delay in spraying which permits weeds to grow beyond the 4 leaf stage may result in decreased control.

Precautions: (1) To avoid excess residues, do not apply within 49 days of harvest. (2) **DO NOT** apply by air. (3) **DO NOT** apply this product when wind conditions will allow drift to adjacent susceptible vegetation. (4) **DO NOT** allow livestock to graze on treated fields. **DO NOT** feed forage, hay or silage from treated fields to livestock.

To protect endangered plant species, one of the following options must be used: (1) Apply only when there is sustained wind away from wetland/transitional zone native plant communities; (2) Leave a 25-foot buffer between treatment area and wetland/transitional zone native plant communities; or (3) Use low pressure nozzles according to manufacturer's specifications that produce only coarse or very coarse droplets.

To protect endangered freshwater invertebrate species, **DO NOT** apply this product within 100 yards of any freshwater spring.

Chemigation: **DO NOT** apply this product through any type of irrigation system.
